

Safely indulge your desire for a holiday

Our measures to guarantee your safety and our safety

Restaurant

Sterilair Pro:

a device that was conceived with high-performance in mind, thanks to UV-C lamps that discharge mercury vapour, designed to kill volatile biological particles.

Sterilair Pro means:

- ✓ Reducing the risk of operator contamination, as also required by the Consolidated Safety Act, and recently also recommended by the WHO (World Health Organisation).
- ✓ Reducing or eliminating the possibility of contamination for operators and guests.
- ✓ Creating a bacteriologically safe environment

Lifts:

UV CleanLight

UV CleanLight by Schindler is the ideal solution for effectively sanitising the cabin's surfaces and, in particular, the pushbutton panel, which is used by numerous people every day and is, therefore, a potential vehicle for infections. The device takes advantage of the germicidal properties of UV-C ultraviolet rays, emitted by a special lamp. UV CleanLight is a state-of-the-art sanitisation system, which enables the killing of bacteria, viruses and other pathogenic microorganisms present on the irradiated surfaces.

At the Hotel entrance:

AC SUPPLY decontamination mats

The new decontaminating and antibacterial floating FFS is a new and innovative system for decontaminating access points to critical areas.

For all the other areas, we have adopted hand sanitiser dispensers and specific anti-COVID-19 cleaning products for the bedrooms.
